8. SUMMARY OF BUTTONS ACTIONS (in view mode)

On the following table we give a summary of the actions which may be performed during the view phase (not programming phase), to effectively execute the actions. It is necessary to press the buttons for some seconds.

	Access to programming Menu		Access to QuickAlarms Menu
	If F1/F2-0 has been set, the indicated switches to the corresponding view (except 11 digits model)		If F1/F2-0 has been set, the indicated switches to the corresponding view (except 11 digits model)
	Retained Alarms reset		Integrator Reset (if the functionally 1 has been enabled by setting r-5=0)

10. ERROR SIGNALINGS

The errors are directly viewed through display. We are going to list all the possible signalings with the corresponding meaning:
 Error: Instantaneous value to display > HI -d value of the 2.5% of the instantaneous value > maximum instantaneous value
 Error: Instantaneous value to display < HI -d value of the 2.5% of the instantaneous value < minimum instantaneous value
 Error: Burn-out of the temperature sensor.
 Error: Communication error with the cold junction thermometer.
 Error: At the start may signal an error on the calibration memory. The functioning of the module is blocked while the Modbus communication is available (if optional card).

11. ORDER CODES

Code	Description
Model S311A	Indicator - integrator with universal analog input
Display	4 digits 6 digits 8 digits 4+7 digits
Power Supply	85-265 Vdc, 18-28 Vdc 0-10V Digital card: RS485 Modbus Port, 2 relay alarms and optional card: Resolution: 1500 Vac/omnium each port
Options	Calibration and configuration Service

12. MODBUS REGISTERS (Optional Card)
 The S311A-XX-L and S311A-XX-H line indicators have MODBUS 16 bits words/registers, accessible by RS485 serial communication (available in case of optional card).
 12.1 Supported MODBUS Commands

SENECA

M001273-E ENGLISH - 13/20

SET2_LONG_MSW	Alarm 2 Threshold (least significant word).	40016 RW
Bit 1/5-0/1	Alarm 2 threshold value referred to the view scale but without decimal point. For example if the value referred to the view scale is 20.0 see 200. See HI_T_LONG_40021 for parameter limits.	
SET2_LONG_LSW <td>Alarm 2 Threshold (least significant word).</td> <th>40017 RW</th>	Alarm 2 Threshold (least significant word).	40017 RW
Bit 1/5-0/1	Alarm 2 hysteresis value referred to the view scale but without decimal point. For example if the value referred to the view scale is 10.0 see 1000. See HI_T_LONG_40021 for parameter limits.	
HSY2_LONG_LSW <td>Alarm 2 hysteresis (least significant word).</td> <th>40019 RW</th>	Alarm 2 hysteresis (least significant word).	40019 RW
HI_T_LONG_MSW <td>START SCALE VALUE OF INSTANTANEOUS VIEW (Most significant word).</td> <th>40021 RW</th>	START SCALE VALUE OF INSTANTANEOUS VIEW (Most significant word).	40021 RW
HI_T_LONG_LSW <td>START SCALE VALUE OF INSTANTANEOUS VIEW (Least significant word).</td> <th>40022 RW</th>	START SCALE VALUE OF INSTANTANEOUS VIEW (Least significant word).	40022 RW
LO_T_LONG_MSW <td>START SCALE VALUE OF INSTANTANEOUS VIEW (Most significant word).</td> <th>40023 RW</th>	START SCALE VALUE OF INSTANTANEOUS VIEW (Most significant word).	40023 RW
LO_T_LONG_LSW <td>START SCALE VALUE OF INSTANTANEOUS VIEW (Least significant word).</td> <th>40024 RW</th>	START SCALE VALUE OF INSTANTANEOUS VIEW (Least significant word).	40024 RW
VALNT_LONG_MSW <td>Constant for integration (Most significant word).</td> <th>40029 RW</th>	Constant for integration (Most significant word).	40029 RW
VALNT_LONG_LSW <td>Constant for integration (Least significant word).</td> <th>40030 RW</th>	Constant for integration (Least significant word).	40030 RW
ADDR <td>Register for the setting of the address address and parity control.</td> <th>40031 RW</th>	Register for the setting of the address address and parity control.	40031 RW
Bit 1/5-0/1	Set the control parity type: 0=Even parity (MODBUS 00000001); 1=Odd parity (MODBUS 00000010); 2=Odd parity (CODD 00000011); 3=Odd parity (CODD 00000010).	40032 RW

12. Holding Registers

The 16-bit Holding Registers have the following structure:
 Most significant Bit Bit Index Least significant bit

Word (16 bits), MODBUS Register

In the table the notation Bit (x,y) indicates all bits from x to y. For example Bit(2,1) indicates bit 2 and bit 1, and serves to illustrate the meaning of the various united components of the register of the two bits. Decimal values are indicated with the symbol

BL1:BL2 contains the modules ID-25.

BL1:BL2 contains the firmware version.

Register containing the internal code of the 40002 firmware.

Register for the setting of the input type and of the temperature measurement unit.

Set the input type:
 1: Voltage
 2: Current
 3: Thermocouple S
 4: Thermocouple R
 5: Thermocouple S
 6: Thermocouple R
 7: Thermocouple S
 8: Thermocouple R
 9: Thermocouple B
 10: Thermocouple E
 11: Thermocouple N
 12: PT100 (2 wires)
 13: PT100 (3 wires)
 14: PT100 (4 wires)
 15: PT100 (3 wires)
 16: PT100 (4 wires)

Temperature Measurement
 0 = resolution: C (0 / F / 10)
 1 = Fahrenheit degrees
 2 = Celsius

Temperature in Celsius or Fahrenheit degrees
 0 = Celsius
 1 = Fahrenheit

Electrical Full Scale of the Input in V/100, mA/100 or %/100

Full scale in Volt/100, mA/100 or %/100 respectively

PROGRAMMING MENU SCHEME

7. SETTABLE VALUES FOR MULTIPLE CHOICE PARAMETERS

The various options for the multiple choice parameters are listed below. Default values are indicated with the * symbol.

- 7.1 C.O.n.F. (FUNCTIONING CONFIGURATION)**
FUnC
 Selects the functioning type:
 0* = function of instantaneous value and integrator value view.
 1 = only function of instantaneous value view.
 2 = only function of integrator view.
IrES
 Enables the reset of the integral by panel and digital input:
 0* = enabled.
 1 = disabled.
- 7.2 I.n.P.t. (ELECTRICAL INPUT)**
tYPE
 Selects the input type among the following:
 1 = Voltage
 2* = Current
 3 = Potentiometer
 4 = TCJ
 5 = TCK
 6 = TCR
 7 = TCS
 8 = TCT
 9 = TCB
 10 = TCE
 11 = TCN
 12 = PT100 (2 wires)
 13 = PT100 (3 wires)
 14 = PT100 (4 wires)
- 7.3 S.C.R.L. (SETTING DISPLAYED VALUE)**
FAHr
 Selects if the temperature will be displayed in:
 0* = Celsius degrees
 1 = Fahrenheit degrees.
FiLt
 Sets the level filter. Admitted Value:
 0* = no filter
 1...20.
- 7.4 A.L.1., A.L.2. (ALARM 1 AND ALARM 2 SETTING)**
tYPE 1/tYPE2
 Sets the alarm type:
 0* = Inactive Alarm
 1 = Alarm on the minimum threshold
 2 = Alarm on the maximum threshold
 3 = Retained alarm on the minimum threshold (reset is not automatic)
 4 = Retained alarm on the maximum threshold (reset is not automatic).

rLY1/rLY2
 Sets the functioning of the correspondent relay (if optional card):
 0* = relay normally opened
 1 = relay normally closed.

7.5 O.U.t. (RETRANSMITTED OUTPUT SETTING)
tYPE
 Sets the type of the retransmitted output:
 1 = 0...10V output
 2* = 4...20 mA output
 3 = 0...20 mA output
 4 = integrator digital output.

7.6 b.U.S. (RS485 SETTINGS)
Addr
 Selects the slave Modbus address. Values from da 1 to 255. Default: 1.
PAR
 Selects the parity control of the serial communication:
 0* = None
 1 = Even
 2 = Odd.
dEL
 Sets the response delay time. Values: 0...255. 0* = no delay, 1 = 1 pause, etc.
bAUd
 Sets the Baudrate:

7.7 S.Y.S. (SYSTEM)
COnt
 Sets the display contrast:
 0* = 100% (minimum contrast) 1 = 50% (maximum contrast) Default: 10.
 2 = 50%
 3 = 25%
 4 = 57600
 7 = 2400
 8 = 14400
 in case of Burn Out of PT100 or Thermocouple.
 0* = Full scale indication
 1 = Start scale indication.

7.8 d.F.L.t. (DEFAULT SETTING)
 1 = Sets the default values for all the parameters.

MI001273-E

ENGLISH -9/20

8. SETTING EXAMPLES

8.1 Modification parameters examples
 We are going to illustrate an example of HI - d parameter modification for a 6 digits model. In this example the digit to modify, that in the real case flashes, is bordered:

Once the parameter to modify has been selected, the set value is for example:

The pressure of the DOWN button entails:

DOWN has brought the digit to the maximum value. Now the pressure of OK/MENU buttons entails the position shift of the digit to modify:

The pressure of the UP button entails:

that is the digit has been increased of a unit. To set a negative value, place on the most significant digit by subsequent pressures of OK/MENU button:

By pressing the DOWN button:

The last digit is brought to the most negative value: -1. By pressing the DOWN button:

Now the minus sign is obtained replacing the first non-useful zero of the set value. By pressing the OK/MENU button the set value is confirmed:

A further pressure of the OK/MENU button, entails the return to the voice correspondent to the just modified parameter:

8.2 Integrator Setting examples

8.2.1 Example 1
 To configure the integrator, access to I.n.t. . . submenu and set opportunely the URlI parameter, fundamental for the correct integration. Let's suppose that we want to obtain in one hour an integral value equal to 5000 (lmp/h) and that the mean value displayed in one hour is equal to 6.000 (correspondent to HI - d parameter value), then the value to set is: 5000*9999/6000=8332.5
 Where 6000 is the value of HI - d without decimal point.
 So we set:
 URlI = 08333

8.2.2 Example 2: Integrator Setting for flow-rate meter
 In this example we want to set the integrator for:
 Display the thousands of accumulated liters.
 Let's suppose that the mean instantaneous value (correspondent to HI - d parameter value) displayed in one hour is: 5 liters/seconds.

Calculation of the integral value in one hour
 If 5,000 liters/sec pass, in 1 hour the instrument accumulates:
 lmp/h = 5 liters/sec * 3600 sec = 18000 liters = 18 thousands of liters.

Valuation of the mean value displayed in one hour (HI - d value without decimal point)
 If 5,000 liters/sec meanly pass, then the mean value displayed in 1 hour without decimal point is:
 5000 (HI - d parameter value without decimal point)

Calculation of URlI
 By inserting the calculated values on the generic formula on page 8:
 URlI = 18*9999/5000=360
